

Sink Amalgam Separator ECOAS04

Cleaning instruments and other contaminated utensils is a significant source of discharged waste that has a negative effect on the environment. Connecting an amalgam separator to the sink unit prevents mercury and other heavy metals from entering the sewage system.

The ECOAS04 sink separator is an all-inclusive, easy to install system for separating amalgam from sink units and other washing areas. A buffer tank regulates water flow levels to guarantee a fully functional amalgam separator.

Technical data

Buffer tank:

Dimensions: Height = 290 mm, Diameter = 310 mm
Material: stainless, acid-resistant steel
Outgoing connection: 25 mm

Separator:

Dimensions: Height = 170 mm, Width = 160 mm, Breadth = 270 mm
Hose connection: 25 mm
