

Do you have a Mercury problem?

We have the solution.

Ecocycle is the only EPA licensed Mercury distilling company in Australasia.

Based in Campbellfield, Victoria, our main plant utilises world class, state-of-the-art, Swedish made mercury recycling technology to recycle large volumes and a wide variety of Mercury containing waste material, including:

- Mining and Mineral processing waste,
- Activated Carbon,
- Catalysts,
- Filtration material,
- Mercury containing chemicals,
- Fluorescent Tubes and HID Lamps,
- Switches and control equipment,
- And any other Mercury containing waste.

We have depots and branches in most State and Territory of Australia. Our recycling services are fast, efficient and cost effective. We also provide collection and transport of all Mercury waste material.

All Mercury waste is processed, treated and recycled in accordance with all applicable regulations and EPA guidelines.

Recycling these materials saves landfill space, reduces greenhouse gas production and safeguards our environment.

Our customers are issued with a Recycling Certificate which acknowledges and recognises recycling commitments.
